DuoColor Body Shell

eNMEy™ .68cal. Valve Core

One Marker, Two Calibers –
As a field rental marker, the eNMEy™ now has another trick up its bolt sleeve. In literally seconds, your field staff can convert between .50 and .68 caliber by hand, with no tools. Swap the barrel, remove or insert the breech insert while the barrel is out and swap the valve core – done! Ready for the chrono!

68 Cal. eNMEy™ –

The mechanical marker that shoots like an electro just keeps getting better! Still featuring the integrated regulator, pneumatic spool valve performance and entry-level price tag that made it famous, the eNMEy™ is easier to maintain than ever before. The newly redesigned bolt places all the critical o-rings in its removable valve core for easy access.

.68cal. Barrel

MonoColor Body Shell

eNMEy™ .50cal. Valve Core

Less Down Time –

For players, down time cleaning their gear is time they aren't out having fun. For field owners cleaning and maintaining the rental fleet is a necessary part of business, but when it's complicated it ties up staff. Fast and easy maintenance means more fun for players and more time for field owners to focus on their customers.

.50cal. Breech Insert + Barrel

.50cal. eNMEy™ as Rental Markers –

Field owners are finding the 50 Cal eNMEy™ is their friend. The lower velocities and impact of 50-caliber paintball have opened new markets with younger players no longer afraid to "take the hit" for the first time. With the bruises and welts taken out of the picture for their kids, moms get on board for birthday parties and group bookings.

NEWLY REDESIGNED FEATURES

SPRING RETURN BALL DETENTS

New spring return ball detents have a longer wear life while preventing double-feeds and chops.

STREAMLINED 4-PIECE BOLT SYSTEM

There are only four components to the eNMEy™ .50 caliber's spool valve system, lubrication of the bolt system can be done in minutes and requires absolutely no tools. There are no springs to lose and no hammers to cock back.

IMPACT REDUCTION INSERTS

Giving the eNMEy™ .50cal. its gentle touch, these inserts reduce gas chamber volume, reducing the stock velocity adjustment range from 240-400fps down to 190-240fps or as low as 120-190fps.

TRUE PNEUMATIC, TRULY MODULAR.
